Test Report, Version 2.0

Amrit Water WhatsApp AI Sales & Order Agent

Document	Test Report v2.0
System tested	v2 AI agent (final configuration: Google Gemini chat model)
Tested by	Saloni Sisodiya, AI Solutions Consultant
Date	November 2026
Result	14 of 14 scenarios passed; 7 defects found and fixed; known limitations listed
Status	Proof of concept on a test number with demo rates. Not client-accepted.

1. Summary

- 14 scenarios were tested through real WhatsApp conversations. All 14 passed.
- Three scenarios (T1, T13, T14) passed only after a fix; the other defects were found and fixed during testing.
- 7 defects were recorded. All are fixed and retested. None remain open.
- The final configuration was re-run in the recorded demo, covering the order flow, pricing, Hinglish, status, complaint, out-of-area delivery, discount and cancellation scenarios.
- Recommendation: suitable for a supervised pilot with owner review. Unattended production use needs the steps in section 8.

2. Approach

Scenario-based testing through real WhatsApp conversations on a Meta test number. One phone acted as the customer and a second phone as the owner. A scenario passes only when all three are correct: the customer reply, the order row in the data table, and the owner alert where one is expected.

Environment

Item	Detail
Channel	WhatsApp Business Cloud API (Meta test number)
Orchestration	n8n cloud (trial plan), workflow published for live tests
Model	Early testing: Groq-hosted open model. Final: Google Gemini chat model
Data	n8n Data Tables: Amrit_waters_orders and Amrit_waters_prices (demo rates ₹108, ₹102, ₹96)
Devices	Customer phone and a separate owner phone
Evidence	Chat screenshots, data table screenshots, owner alert screenshots, the demo video

3. Scenario results

ID	Scenario	Customer input (example)	Expected	Actual	Result
T1	Greeting only	hey	Short greeting; no assumed order	Greeted and asked how it could help	Pass (after D4)
T2	New order, one field at a time	I want 10 cartons; station road ratlam; no customisation	Asks only for missing details; draft saved	Asked location, then customisation, then showed 10 cartons at ₹102, free delivery, ₹1,020	Pass
T3	Quantity change before confirming	actually make it 5 cartons	Draft updated and recalculated	5 cartons, ₹108, delivery ₹50, total ₹590	Pass
T4	Customer says yes	yes	Status confirmed; one row; owner alerted; payment asked	Order confirmed, payment question sent, owner alert received, one confirmed row	Pass
T5	Payment method	cash	Thanks the customer; owner notified	Thanked the customer; owner told the payment method	Pass
T6	Bottles to cartons	24 bottles, station road ratlam, no customisation	2 cartons; total ₹266	2 cartons at ₹108 plus ₹50 delivery = ₹266	Pass
T7	Not a multiple of 12	30 bottles	Asks for whole cartons	Asked for whole cartons of 12 bottles	Pass
T8	Large quantity price	60 cartons ka price kitna hoga?	₹96 slab; ₹5,760	Quoted ₹96 per carton, ₹5,760, free delivery, before GST	Pass
T9	Delivery outside Ratlam	Deliver 10 cartons to Indore	No quote; owner alerted	Said delivery is within Ratlam only; owner alert received	Pass
T10	Quality complaint	Water tastes bad	Apology; owner alerted	Told the customer the owner would contact them; owner alert received	Pass
T11	Cancel an unconfirmed draft	Cancel my order (with a pending draft)	Draft set to cancelled	Draft row set to cancelled; confirmed order unchanged	Pass
T12	Cancel a confirmed order	Cancel my confirmed order; 1 and 3	Not cancelled; request goes to the owner	Listed the confirmed orders, asked which, told the owner about orders 1 and 3; both stayed confirmed	Pass
T13	Order status	Where is my order?	Statuses from the table only	Reported the order id and status confirmed, with no delivery claims	Pass (after D5)
T14	English and Hinglish	English message, then Hinglish message	Reply matches the latest message	English reply to English, Hinglish reply to Hinglish	Pass (after D4)

4. Defects found and fixed

ID	Severity	Issue	Root cause	Fix	Retest
D1	High	Agent failed on real WhatsApp messages (empty prompt)	Prompt mapped to the mock-data shape, not the live payload	Remapped the prompt to the processed message field	Passed with live messages
D2	High	Wrong total: ₹2,160 instead of ₹2,040 for 20 cartons	The model did its own arithmetic and used the wrong rate	Rule: every total comes from the Calculator tool	Later totals (₹590, ₹266, ₹5,760) correct
D3	Medium	Rate-limit errors in the middle of an order	Free-tier limit on tokens per minute	Paced tests, shortened memory; later moved to Gemini; fallback model advised for production	No further errors in final runs
D4	Medium	Wrong language and a stale order carried into a new chat	Memory mirrored earlier replies	Language rule based on the latest message; fresh session keys for tests	T1 and T14 pass
D5	Medium	Bot claimed orders were ready for delivery	No delivery data exists	Rule: report only fields in the table	T13 passes
D6	Medium	Owner alert appeared in the customer's chat	Workflow change not published; one number used for both roles	Published the workflow; separate owner number	T4, T9, T10 pass
D7	High	One reply showed the model's internal reasoning	Reasoning-style model leaked its thinking into the output	Output rule in the prompt, a reply-check node, and a model change	No recurrence in final runs

Lesson recorded: workflow changes take effect only when published. A pre-release checklist is part of the Runbook.

5. Requirement coverage

Requirement (BRD v2)	Tests	Status
FR1 Receive and reply on WhatsApp	T1, T2	Covered, passed
FR2 Collect order details one at a time	T2	Covered, passed
FR3 Bottles to cartons	T6, T7	Covered, passed
FR4, FR5 Prices and totals	T3, T6, T8	Covered, passed
FR6, FR7 Draft saved and editable	T2, T3	Covered, passed
FR8 Confirmation, payment, owner alert	T4, T5	Covered, passed
FR9 Cancel an unconfirmed draft	T11	Covered, passed
FR10 Confirmed orders not cancelled by the bot	T12	Covered, passed
FR11 Order status	T13	Covered, passed
FR12 Escalation	T9, T10 (discount request shown in the demo)	Covered, passed

Requirement (BRD v2)	Tests	Status
FR13 Language	T14	Covered, passed
FR14 Memory	T3, T14	Covered, passed
FR15 Reply check	D7 regression in final runs	Covered, no leak observed; no dedicated trigger test

6. Observations

- Sampled agent executions completed in about 2 to 3.5 seconds.
- Every customer message creates several n8n executions, because Meta also sends delivery and read updates to the same webhook. This matters for plan limits.
- Model output is not deterministic, so the same message can produce differently worded replies. Check results after any prompt or model change.

7. Known issues and coverage gaps

Item	Detail
Formatting	Occasional stray asterisks around bold text in WhatsApp replies
Abandoned drafts	Drafts the customer never confirms remain as pending_confirmation rows
Memory	Resets if n8n restarts
Not tested	Hindi in Devanagari script, images, voice notes and location messages, concurrent customers, load, and security testing
Reply check	No test deliberately forced the check to trigger
Data	Demo rates and test orders only; no real customers

8. Recommendations before real use

1. Replay 15 to 20 real past customer chats and compare the agent's answers with the owner's.
2. Add a fallback model and a paid model tier.
3. Move memory to a database and keep conversation logs.
4. Use approved WhatsApp templates for owner alerts.
5. Add automated regression tests that replay the 14 scenarios after any prompt or model change.
6. Monitor failed executions and name an owner for the monitoring.

9. Evidence index

- Demo video: amrit-water-ai-agent-demo.mp4 (about 3 minutes, with voiceover)
- Screenshots: screenshots/ folder (n8n workflow, order flow, guardrails, owner alerts, orders table, price table)
- Workflow export: workflow/ folder (sanitized)
