

Solution Architecture

Problem Statement

Amrit Water currently handles customer enquiries and orders manually through phone calls and WhatsApp messages. Customers repeatedly ask about pricing, bottle availability, customized labels, delivery locations, and bulk orders. This manual process consumes time, lacks centralized order tracking, and can lead to delayed responses or missed enquiries.

Proposed AI Solution

Design and implement an AI-powered WhatsApp Sales & Order Management Assistant that automates customer enquiries, collects structured order details, logs enquiries into a lightweight CRM, and escalates complex requests to the business owner for approval.

Objectives

- * Automate routine customer enquiries
- * Capture structured order information
- * Reduce manual effort
- * Improve response time
- * Centralize customer data
- * Support human approval for business-critical decisions

System components

Component	Technology	Purpose
Customer Interface	WhatsApp	Customer communication
Messaging Gateway	Twilio WhatsApp Sandbox	Connect WhatsApp to n8n
Workflow Engine	n8n	Automation and orchestration
AI Model	OpenAI GPT	Intent detection
CRM	Google Sheets	Store enquiries and orders
Business Owner	WhatsApp	Manual review an

End to End workflow

AI responsibilities

AI will	Human will
Answer FAQs	Confirm pricing
Identify customer intent	Confirm stock
Extract order details	Approve customized orders
Ask follow-up questions	Finalize delivery
Log enquiries	Resolve complaints
Draft responses	

Customer journey

1. Customer sends a WhatsApp message.
2. AI understands the request.
3. AI gathers missing details if needed.
4. Order is recorded in the CRM.
5. Business owner receives a notification.
6. Customer receives a confirmation.
